Reference:
The CS2 Acetabular Cup System is designed to help restore natural kinematics. The system offers a wide range of options to help address both primary and revision surgeries.

The CS2 system is available with two types of liners: cross-linked UHMWPE poly and VitalitE crosslinked poly. After 5 million cycles, VitalitE crosslinked poly has shown a 78% reduction in abrasive wear compared to cross-linked UHMWPE poly.

Neutral, hooded, and lateralized cross-linked polyethylene liners are available for up to 36mm heads.
